

MausoGuard™

The MausoGuard is designed for total casket enclosure, protecting the integrity of your mausoleum.

The MausoGuard is the only casket enclosure utilizing a rigid lower tray. The tray, constructed from high density polyethylene, features the Uni-Rolled upper edge and Diamond Rail base.

The upper bag is constructed from a seven layer, co-extruded film. Bag material is FDA approved and offers an extremely high barrier to odor and oxygen transmission. Locking rails provide a mechanical clamp to complete the enclosure and protect the assembly during entombment.

To assemble, drape the bag over the rolled edge of the tray, pull the backing off the factory installed tape and the bag adheres to the tray. The MausoGuard is easily assembled by one person in only a matter of minutes.
