

THE ULTIMATE IN
**CASKET &
MAUSOLEUM
PROTECTION**

MausoGuardTM

The MausoGuard is a state-of-the-art casket enclosure constructed from the highest quality materials available today. It's a compact, easy to assemble system that provides the very best protection for your mausoleum, and using it guarantees you peace of mind for all of your entombments.

The MausoGuard is constructed from three main components: a lower tray, an upper enclosure and locking rails. The lower tray is made from high-molecular weight polyethylene, a rugged material that's virtually indestructible. It features a Uni-Rolled upper edge and Diamond Rail base — special geometric features that make our tray the strongest, sturdiest tray available.

The upper enclosure is made from a multi-layer, durable film. This enclosure is FDA approved and offers an extremely high barrier to odor and oxygen transmission. The upper enclosure mounts to the tray with a two part fastening system which ensures a complete, secure and permanent bond.

Locking rails along the outer edges of the product provide a mechanical clamp between the upper enclosure and the tray. These rails are made from a robust material and will protect the assembly during entombment.
