

# MausoTray™

## LOW COST PROTECTION FOR YOUR MAUSOLEUM CARE!

The MausosTray uses a computer designed Diamond-Rail\* system and UniRoll\* edge which eliminates warping or twisting during shipping or storage. It provides rugged and durable strength for handling the casket during entombment.

The MausosTray is designed to nest for economical shipping and space saving storage. The Diamond-Rail system reduces the compacting of the trays allowing for ease of separation.

Constructed of high-molecular weight polyethelene, one of the most durable and long lasting of all space age polymers. The MausosTray is designed and engineered for the ultimate present and future integrity of your mausoleum.

The MausosTray fits all standard mausoleums and accommodates today's larger caskets.
